

Installation: Yseop Savvy for Excel

Now that you've downloaded Yseop Savvy for Excel, here are the final 3 steps to finish installing:

1

Unzip the downloaded file

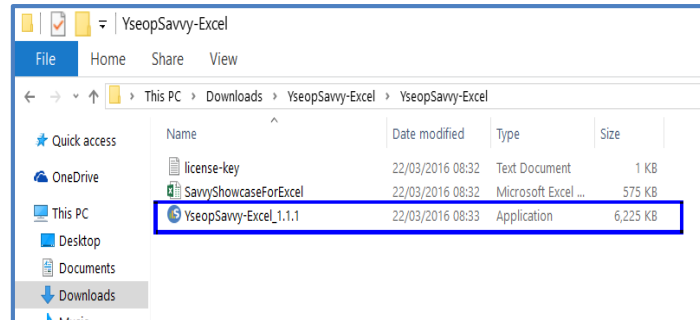

The Savvy file that you've downloaded is in a **compressed format**. Start by extracting all the files from the folder: right-click the file you downloaded from Yseop and select "Extract All". Attempting to run the installer without unzipping the file will not work correctly.

2

Launch YseopSavvy-Excel.exe

Once you've unzipped the file, open the YseopSavvy-Excel folder and you will see an Application file (.exe) named YseopSavvy-Excel. Double click on this file and a setup wizard will launch in a new window.

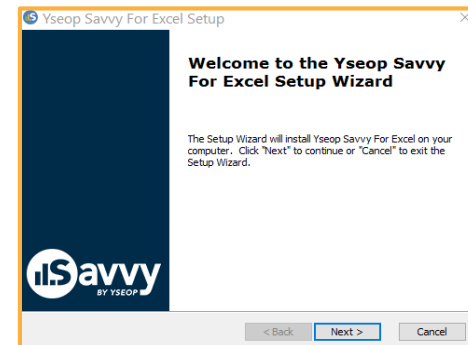

3

Complete the Setup Wizard

Complete each prompt from the setup wizard. It will guide you through the steps to complete the installation.

After you've finished all the prompts with the installation wizard, **you're done! Savvy's installed**. You can now start generating text straight from your Excel charts.
